Continuation of 11. does NOT place the application in condition for allowance because: Applicant does not amend claims. The Examiner has carefully reviewed and considered the applicant's request for reconsideration. However, the Examiner does not find applicant's arguments persuasive.

For example, applicant states that the Examiner appears to take the position that many of the claimed elements are inherent in Laing. The applicant's argument rest on the fact that the Examiner states that it is implied that the anti-virus system will prevent the installation of applications [paragraph 28-30]. The examiner asserts that it necessarily flows from Laing that when an anti-virus system is engaged, it prevents the installation of applications which are detected to include a virus and that when a virus is not detected, the application will be installed. The purpose of an antivirus program is to examine incoming files for viruses as a computer receives them.

For example, one technique is whitelisting. Rather than looking for only known bad software, this technique prevents execution of all computer code except that which has been previously identified as trustworthy by the system administrator. By following this "default deny" approach, the limitations inherent in keeping virus signatures up to date are avoided. Additionally, computer applications that are unwanted by the system administrator are prevented from executing since they are not on the whitelist.
